PREFACE

Schools of public health have been educating professionals in the techniques of health preservation and disease prevention and control since the first decades of the twentieth century. Some schools of public health had their beginnings in university schools of medicine; others were conceived from the outset as autonomous units within their parent institutions. Today there are twenty-four accredited schools of public health in the United States, at eight private and sixteen public universities.[1]

Unlike other health professional schools which emphasize a specific clinical discipline (for example medicine, nursing or dentistry), schools of public health educate a wide range of professionals, from biostatisticians and epidemiologists to health administrators, community health educators, and specialists in areas such as environmental and occupational health, mental health, population studies, international health and the behavioral and social sciences.

The schools have a combined enrollment of over 9,000 students and a faculty in excess of 1,800. Graduate education in each of the 24 schools is organized around nine major specialties:

- Biostatistics
- Epidemiology
- Health Services Administration
- Public Health Practice and Program Management
- Health Education/Behavioral Sciences
- Environmental Sciences
- Occupational Safety and Health
- Nutrition
- Biomedical and Laboratory Sciences

Graduates of the schools of public health work primarily in the fields of health promotion and disease prevention. They represent the basic resource pool from which federal, state and local health and environmental agencies draw their manpower needs. Graduates also work and teach in university settings. Industry relies heavily on the schools to train employees involved in industrial hygiene, occupational safety and health, environmental toxicology, and other areas.

The Association of Schools of Public Health (ASPH) operates a Data Center that collects and compiles aggregate data on applicants, students, graduates, faculty and expenditures in each school of public health. The data collected serves the schools and various federal, state and local agencies and private institutions in planning and implementing their respective public health training, research and service activities.

---

1 The College of Public Health at the University of South Florida was accredited in Spring 1987. It is not included in this report covering the 1985-86 academic year.

NOTES ON FACULTY DATA

1. Data collection -- ASPH collected data on faculty from 1974-75 through 1980-81 by individual questionnaires. Since the 1983-84 academic year, data has been collected in aggregate form. Data forms covering the previous academic year are distributed to the schools in October of each year.

2. Time period -- Data on faculty is for the Fall semester.

3. Full-time equivalent (FTE) -- No distinction is made between faculty members appointed for the academic year (9 months) or those appointed for the fiscal year (11 months). A full-time appointee under either system is counted as a 1.00 FTE.

4. Academic Title -- "Other" includes adjunct faculty, research faculty and all others who have a title other than professor, associate professor, assistant professor, instructor or lecturer.

5. Department -- The following categories are used:

   BIOSTAT - Biostatistics, biometry.

   EPID - Epidemiology. Where epidemiology and biostatistics programs are combined, data is recorded under epidemiology.

   HSA - Health services administration, hospital administration, health policy, health planning, health management, health services organization, health law, evaluation research.

   PHP&PM - Public health practice and program management, maternal and child health, gerontology, dental public health, optometric public health, public health nursing, public health social work, veterinary public health, mental health, community health sciences, community health practice.

   H.EDUC/BS - Health education, public health education, health education administration, behavioral sciences, socio-medical sciences, health promotion, health behavior.

   ENV.SC - Environmental science, environmental health, toxicology, radiological health, environmental chemistry, water quality, environmental health planning. Where environmental health and occupational safety and health programs are combined, data is recorded under environmental health.

OS&H - Occupational safety and health, industrial hygiene, occupational medicine, aerospace medicine.

NUTR - Nutrition, public health nutrition.

BIOMED - Biomedical and laboratory sciences, microbiology, parasitology, immunology, cancer biology, biochemistry, biophysics, pathobiology.

OTHER - All other departments or programs including international health, population/family planning, tropical public health, urban health, disease control, genetics, clinical research analysis.

UNKNOWN - Department is unknown.

ADMINISTRATION - Faculty member is engaged exclusively in administrative duties.

PLEASE NOTE that faculty are classified by <u>department</u> or program rather than specific area of teaching responsibility. In many cases the department given reflects the teaching area of the faculty member, but in some cases a department will include faculty members from more than one area. This is particularly true of the biostatistics (often included in epidemiology) and occupational safety and health (often included in environmental sciences) areas, but can apply to others as well. Therefore, it should not be assumed that the total number of faculty in a particular department (e.g., nutrition) reflects the total number of faculty members in this area of teaching, as some schools may combine two or ore subjects in a department.

6. <u>Highest degree</u> -- Three categories are used--bachelors, masters and doctorates. Faculty members in the schools of public health hold a variety of degrees within these three categories -- nearly fifty different degrees were reported in the Fall 1985 data.
